

GalooliOTO offers 3 types of smart IoT units that integrate with connected vehicle technologies, extract their data and turn it into practical business intelligence tools. Using AI predictive models, GalooliOTO's Smart Remote Management Solution enables customers to leverage 70% of the data being collected, analyze real-time reports and convert them into money-saving measures.

Make the Most of Your Vehicle's Data

K1 – Small and Versatile

The K1 IoT unit is made for extracting data from the connected vehicle with a distinct focus on location tracking and driving behavior. The unit connects to the vehicle's ignition and battery in order to indicate its On/Off status and health condition. In addition, the unit uses advanced GPS technology to deliver real-time data to Galooli's server and then displays the vehicle's route and location on Galooli's various web and mobile based solutions.

Key Benefits

- Light & Small
- Easy Installation & Configuration
- Minimum Cost, Maximum Value

Value Proposition

- Track and Trace
- Driver Behavior
- Battery Health
- POI and Geofencing
- Theft Prevention - Immobilizer
- Smart BI Dashboards
- Customized Reports
- Configurable Events and Alerts

K2 – All in One

The K2 IoT unit is made for extracting data from the connected vehicle in order to turn it into actionable business insights. On top of that, the K2 can connect to multiple components within the vehicle including OBD or CAN bus, external sensors, sender wire, and Dallas Key or RF for driver identification. Containing a built-in accelerometer, SIM card, and GPS connectivity, the unit can gather valuable data and then sends it to Galooli's server for reports and dashboard analysis.

Key Benefits

- All in One
- Connects to Every Key Component of the Vehicle
- Fully Integrated

Value Proposition

- Track and Trace
- Driver Behavior
- Theft Prevention - Immobilizer
- Battery Health
- Fuel Management
- Engine Diagnostics*
- ADAS (Adaptive Driver Assistance Systems) such as Mobileye, MoveOn and more*
- Driver Identification*
- POI and Geofencing
- Smart BI Dashboards
- Customized Reports
- Configurable Events and Alerts

K3 – Plug & Play

The K3 IoT unit is GalooliOTO's new and innovative plug & play solution. Its greatest advantage lies in the fact that despite its small size and simple connectivity to the OBD port, it can extract large amounts of data, including fuel level and engine diagnostics. In addition, it utilizes a built-in accelerometer to provide driving behavior information and uses a SIM card and GPS connectivity to transmit tracking and tracing data to Galooli's server.

Key Benefits

- Plug & Play - Easy Installation
- Light & Small
- Simple Integration with the OBD system

Value Proposition

- Track and Trace
- Driver Behavior
- Battery Health
- Fuel Management
- Engine Diagnostics
- POI and Geofencing
- Smart BI Dashboards
- Customized Reports
- Configurable Events and Alerts
